Boolean operators

AND/NOT/OR

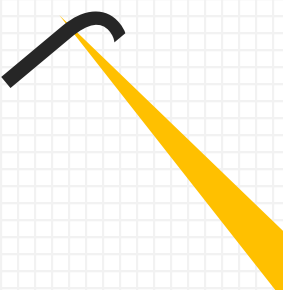

Time of part

00:10

Boolean operators

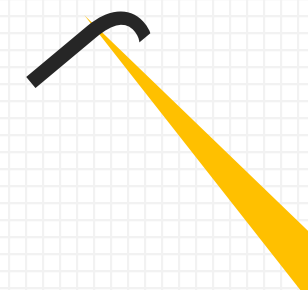

Boolean Operators are simple words (AND, OR, NOT or AND NOT) used as conjunctions to combine or exclude keywords in a search, resulting in more focused and productive results. This should save time and effort by eliminating inappropriate hits that must be scanned before discarding.

And

And combines search terms so that each search result contains all of the terms.

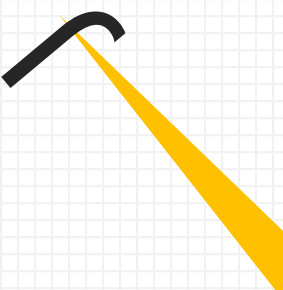

Use **AND** to narrow your search: all of your search terms will present in the retrieved records.

OR

OR—either term (or both) will be in the returned document.

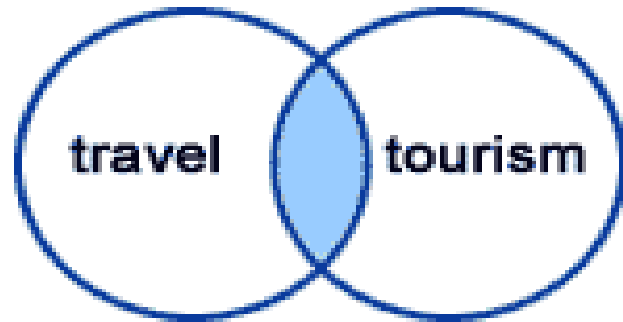

The Boolean operator OR allows you to broaden a concept and include synonyms.

Not

Not excludes terms so that each search result does not contain any of the terms that follow it.

Use **NOT** to exclude term(s) from your search results.

travel **AND** *tourism*

travel **OR** *tourism*

travel **NOT** *tourism*

(travel **OR** *tourism)* **AND** *Web*

(travel **AND** *tourism)* **NOT** *tourists*

Phrase searching

Phrase searching narrows your search results by allowing you to define precisely how you want the words to appear.

“nursing care” AND “hospital managers”

AIMS AND OBJECTIVES: To identify the contribution of hospital, unit, staff characteristics, staffing adequacy and teamwork to missed **nursing care** in Iceland hospitals. BACKGROUND: A recently identified quality indicator for **nursing care** and patient saf ...

Limiters

Truncation

Use **truncation** to identify all possible endings of the key terms that you use, e.g. *hospital manag** will identify *hospital managers* or *hospital management*. Note that truncation symbols vary depending on the database. The most commonly used is * (e.g. PubMed, EBSCO databases).

PICO

Evidence based medicine

Time of part

00:20

Anatomy of a Good Research Question

PICO is a focused clinical question that consists of 3 or 4 of these concepts. Writing a PICO question facilitates the search process and identification of best evidence.

- **P** (Patient problem/characteristics)
- **I** (Intervention)
- **C** (Comparison Intervention, where applicable)
- **O** (Outcome)

PICO Formula

PICO

The acronym used to help formulate a well-defined searchable question.

P

- Patient, population or problem: What are the most important characteristics of the patient and their health status?

I

- Intervention/Exposure: What main intervention are you considering (medical, surgical, preventative)?

C

- Comparison: What are the alternative benchmark or gold standards being considered, if any?

O

- Outcome: What is the estimated likelihood of a clinical outcome attributable to a specific disease, condition or injury?

7 Steps to the Perfect PICO Search

1

A large white number '1' is centered inside a dark grey circle with a yellow border. The circle is connected to a dotted line that starts at the left edge of the frame and ends at the top of the circle.

**Formulate the
PICO Question**

2

A large white number '2' is centered inside a dark grey circle with a yellow border. The circle is connected to a dotted line that starts at the top of the circle and ends at the bottom of the circle.

**Identify
Keywords for
each PICO
Element**

3

A large white number '3' is centered inside a dark grey circle with a yellow border. The circle is connected to a dotted line that starts at the bottom of the circle and ends at the top of the circle.

**Plan the Search
Strategy**

4

A large white number '4' is centered inside a dark grey circle with a yellow border. The circle is connected to a dotted line that starts at the top of the circle and ends at the right edge of the frame.

**Execute the
Search**

7 Steps to the Perfect PICO Search

A large white number '5' inside a black circle with a yellow border, connected to a dotted line path.

5

**Refine the
Results**

A large white number '6' inside a black circle with a yellow border, connected to a dotted line path.

6

**Review the
Literature**

A large white number '7' inside a black circle with a yellow border, connected to a dotted line path.

7

**Assess the
Evidence**

STEP 1: FORMULATE THE PICO QUESTION

You are a Registered Nurse working on a Urology unit. One of your patients is a 55-year-old man who is recovering from abdominal surgery – specifically a laparoscopic prostatectomy. The patient complains of abdominal pain and nausea. His abdomen is distended, and he has no bowel sounds. The physician suspects a paralytic ileus and confirms the diagnosis based on the combination of clinical features and imaging.

At the next Evidence-Based Nursing Practice Committee meeting, you discuss this case. The committee decides to do a case study to determine if there is evidence to suggest that a simple intervention such as chewing gum post-operatively can prevent a post-operative ileus following abdominal surgery.

Based on this scenario, our research question is: “**In patients undergoing *abdominal surgery*, is there evidence to suggest that *chewing gum* post-operatively compared with not chewing gum post-operatively affects *post-operative ileus*?”**”

STEP 2: IDENTIFY KEYWORDS FOR EACH PICO ELEMENT

Population (P) – What individual or group are we interested in studying?

Intervention (I) – What is the action (intervention, treatment) we are considering taking?

Comparison (C) – To what other action (intervention, treatment) are we comparing the considered action?

Outcome (O) – What do we anticipate as an outcome?

“In patients undergoing *abdominal surgery*, is there evidence to suggest that *chewing gum* post-operatively compared with not chewing gum post-operatively affects *post-operative ileus*?”

STEP 2: IDENTIFY KEYWORDS FOR EACH PICO ELEMENT

PICO ELEMENTS	KEYWORDS
P (Patient or Population)	Patients undergoing abdominal surgery
I (Intervention)	Chewing gum
C (Comparison)	Not chewing gum
O (Outcome)	Affects post-operative ileus

STEP 3: PLAN YOUR SEARCH STRATEGY

Plan a search strategy by:

1. Determining which database(s) to search
2. Identifying the major elements of your question
3. Translating natural language terms to subject descriptors, or synonyms

PICO ELEMENTS	KEYWORDS	SEARCH TERMS	SEARCH STRATEGIES
P (Patient or Population)	Patients undergoing abdominal surgery	Abdominal Surgery	Abdominal surgery OR Surgery OR Postoperative OR Recovery
I (Intervention)	Chewing gum	Chewing gum	Chewing Gum OR Gum
C (Comparison)	Not chewing gum		
O (Outcome)	Affects post-operative ileus	Postoperative Ileus	Postoperative Ileus OR Paralytic Ileus OR Ileus

STEP 4: EXECUTE THE SEARCH

In databases:

Medline

Scopus

Science Direct

EBSCO

Google scholar

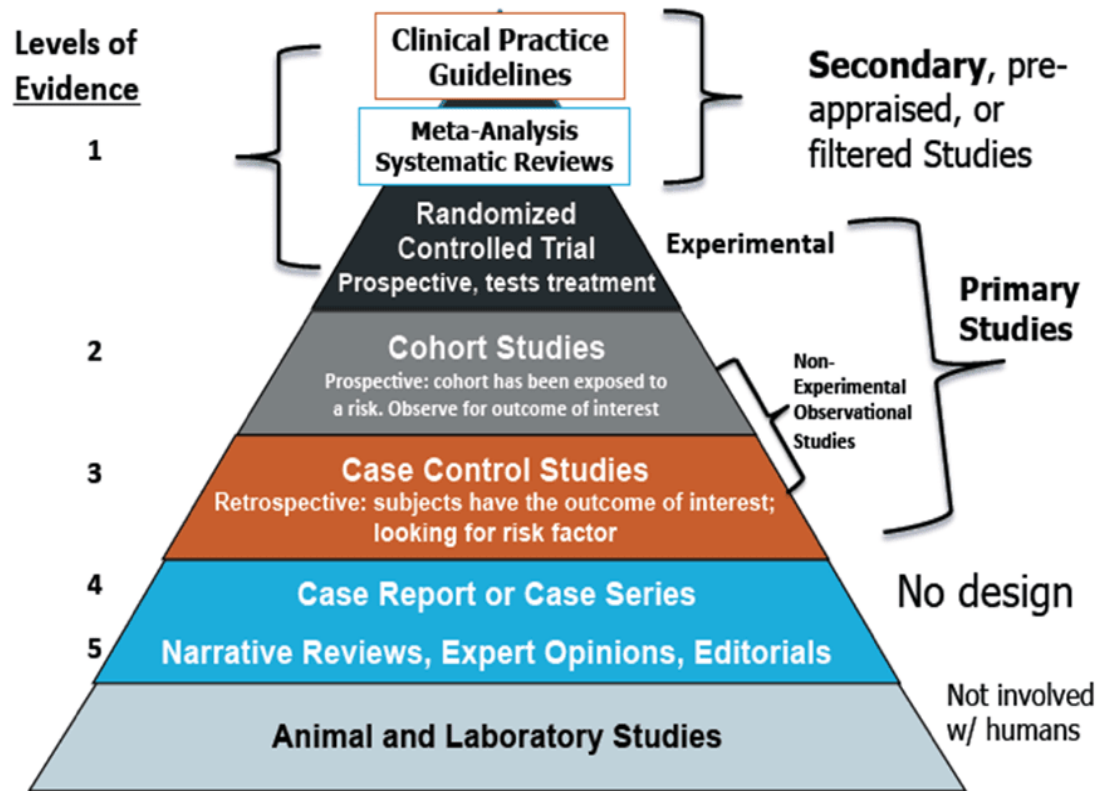

STEP 5: REFINE YOUR RESULTS

You can now refine your results by adding limiters. Applying limiters to your search will allow you to focus your results to the most pertinent and relevant content ensuring that you aren't wasting time wading through content that may not be useful.

For example, you may wish to limit your results by
Date and Type

STEP 6: REVIEW THE LITERATURE

STEP 7: DETERMINE THE LEVEL OF EVIDENCE

نکته

- پیشنهاد می‌کنیم راهنمای جستجوی پیشرفته را مطالعه کنید!
- بین کلمات فقط فاصله بزنید و هیچ علامت دیگری جز نقطه تاپ نزنید!
- اگر کلمات را با نقطه «.» به هم بچسبانید باهم جستجو می‌شوند.
- نمونه:** صرفه‌جویی غربال‌گری یارانه‌انرژی خصوصی‌سازی درون‌شهری بهره‌وری‌نیروی‌کار بدین ترتیب جستجو بر اساس عبارت مورد نظر شما «یارانه انرژی» انجام می‌شود و تک تک کلمات به تنهایی جستجو نمی‌گردند.
- این کار به ویژه برای کلمات دو بخشی مانند صرفه‌جویی، بهره‌وری و غربال‌گری ضروری است در غیراینصورت نتایج شما برای مثال شامل کلماتی چون ریخته‌گری، تصدی‌گری و ... خواهد بود.
- نام نویسندگان را می‌توانید همزمان با سایر کلمات جستجو کنید یا فقط گزینه «نویسنده» را علامت بزنید.

Pubmed

Pubmed توسط مرکز ملی اطلاعات بیوتکنولوژی NCBI در کتابخانه ملی پزشکی ایالت متحده NLM واقع در موسسه ملی بهداشت NIH توسعه و نگهداری می شود. اصلی ترین پایگاه Pubmed مدلاین medline که مهمترین و معروفترین پایگاه داده اطلاعات کتابشناختی مقالات پزشکی، دندان پزشکی، پرستاری و علوم پایه است و به همین دلیل در برخی موارد دو واژه پاب مد و مدلاین به جای یکدیگر بکار می روند، علاوه بر مدلاین پایگاه های دیگری هم از طریق این موتور جستجو قابل دسترس هستند.

Pubmed یک موتور جستجوی تحت وب رایگان است که شامل بیش از ۲۸ میلیون استناد مقاله طبی از Medline، مجلات علوم زیستی و کتاب های آنلاین می باشد.

Pubmed ترکیب دو کلمه Pub مخفف Public و Med مخفف Medline می باشد.

PubMed

PubMed comprises more than 30 million citations for biomedical literature from MEDLINE, life science journals, and online books. Citations may include links to full-text content from PubMed Central and publisher web sites.
